Suresh Kumar Vijayan

Software Developer

+91-9994683704 sureshvijayan29592@gmail.com Chennai,India

SUMMARY

- Software Developer with 6+ years of Experience in developing and customizing **CAD / CAE automation** tools and Engineering Applications.
- Strong expertise in **CAD customization** using **CATIA V5**, **SolidWorks**,**Creo** and **Hypermesh**, delivering efficient and reliable automated design solutions.
- Proficient in developing engineering automation tools using **C#.NET**, **Python**, **VBA**, **TCL/TK**, and **C++**.
- Extensive experience in **design workflow automation**, **developing custom toolkits** and scripts to improve productivity and **reduce manual effort.**
- Hands-on experience in **GUI-based engineering application** development using **WPF** and **Windows Forms**.
- Skilled in **BOM automation**, **CAD data validation**, and **rule-based design checking.**
- Experience in maintaining and enhancing **legacy engineering automation tools**.
- Strong background in interfacing **CAD tools** with engineering systems and supporting integration with enterprise platforms.
- Proven ability in **troubleshooting**, **testing**, and **validating automation** tools to ensure **accuracy** and **reliability**.

EXPERIENCE

Software Engineer

Porto, Portugal

Global Blue

06/2024 - 11/2025

- Developed and maintained Windows-based applications using **C#** and **WPF** for the **IC2 Integra** system.
- Designed and enhanced **terminal-based application** in **C++** to support POS (Point of Sale) system integrations.
- Conducted **code maintenance**, **refactoring**, and **bug fixing** to improve system performance and reduce production issues.
- Supported **CI/CD** deployments using Jenkins, ensuring smooth build and deployment pipelines.
- Actively participated in **Agile/Scrum** ceremonies including daily stand-ups, sprint planning, reviews, and retrospectives.
- Used **JIRA** for task tracking, sprint planning, defect management, and agile workflow management.
- Reduced development time by **30%** by creating reusable components for **5** projects.

Software Engineer

Fundão, Portugal

Capgemini

12/2022 - 05/2024

- Developed and maintained Windows-based applications using **C#** and **C++** for ThermoFisher and Malvern Panalytical.
- Developed automation tools to support **product development workflows** for Thermo Fisher and Malvern Panalytical applications.
- Developed software modules to automate **configuration**, **validation**, and **testing** of infotainment system components.
- Implemented **software enhancements**, **performance optimizations**, and **bug fixes** to ensure system stability.
- Supported build and deployment activities using **CI/CD** tools.
- Used JIRA for task management, defect tracking, and sprint execution.

EXPERIENCE

Software Engineer
Chennai, India

Saipem

12/2020 - 11/2022

- Designed and developed **CAD automation tools for CATIA and SolidWorks** to streamline mechanical design and drafting processes.
- Automated the **design and generation of Jigs and Fixtures** using **C# and C++**, reducing manual modeling time and improving design accuracy.
- Built CAD-integrated tools to automate **part creation, assembly generation, and drawing creation**.
- Developed logic-driven automation to generate **standardized engineering outputs** based on user inputs and design rules.
- Implemented automation to reduce manual effort in **proposal preparation and engineering documentation**.
- Maintained and enhanced **legacy automation systems**, improving reliability and performance.
- Supported system integration across **CAD tools and enterprise applications**.

KBE Engineer
Bangalore, India

Faurecia

11/2018 - 10/2020

- CAD Tools Development using **Python, C#.NET, and C++.**
- Maintained legacy tools developed using **CATVBA.**
- Developed and implemented **design process automation** to reduce production time and delivery errors using **Python, C#.NET, and C++**.
- Collaborated with the **Indian Institute of Science (IISc)** team to develop **FIDES – Faurecia Intelligent Design Engineering System**.
- Researched emerging **CAD technologies and automation trends** to stay updated with industry best practices.
- Followed international engineering standards such as **ISO, ANSI, and ASME** during design and automation development.

Software Engineer
Chennai, India

HCLTech

10/2016 - 11/2018

- Involved in **CAE Tools customization** using **TCL/TK and Python** scripting languages.
- Coordinated with **CAE engineers** to evaluate and improve software and standardized engineering processes.
- Developed various **Macros in Hypermesh and ANSA** tools and minimized project execution time.
- Involved in **Excel customization** to support various document processes in projects.
- Developed **CATIA Applications and automation tools using VBA, Python, and C++**.

Application Engineer
Chennai, India

Trikonic Technology Services LLP

09/2015 - 03/2016

- CAD Tools Development with **SolidWorks** using **C#.NET**.

Design Engineer
Chennai, India

Unique Engineering

07/2013 - 07/2015

- Designed **Jigs and Fixtures** for customer parts using **SolidWorks, CATIA, Pro-e**.

SKILLS

CAD / CAE Tools: CATIA V5, Creo, SolidWorks, HyperMesh, ANSA

Programming Languages: C#.Net, C++ , Python, VBA, TCL/TK, JavaScript

Frameworks & Technologies: .NET Framework, WPF, MVVM Architecture, Agile/Scrum , SDLC, SOLID

Engineering Systems: BOM Management, Engineering Workflow Processes, Design Data Validation

Tools & IDEs: Visual Studio, Git, TFS, Azure DevOps, GitHub, Bitbucket, GitLab

SKILLS

Testing & Quality: Unit Testing, Functional Testing, Debugging & Troubleshooting, Code Refactoring

PROJECTS

SMART Program for Energy and City Development

- Generate a proposal for implementing the energy grid in green and brownfield sites.
- Generate a detailed report with a dashboard for smart city development planning.
- Calculate the cost of residence with green energy and aquaculture farms.
- Calculate the CAPEX and OPEX for configured renewable energies.

FIDES – Faurecia Intelligent Design Engineering System

- Developed CAD automation modules to generate design configurations based on customer inputs.
- Automated design validation rules to reduce manual errors.
- Integrated CATIA automation workflows using Python and C#.NET.

Enabler Silencer Application

- Developed CATIA V5 based automation tool to create **Silencer Assembly Models** based on predefined CAD methodologies.
- Implemented design automation logic using **C#.NET** to automate part creation and assembly structure.

Drawing Spell Checker Tool

- Built a CATIA tool to automatically check and correct spelling errors in drawing sheets.
- Developed using VBA to improve drawing quality and reduce manual review effort.

View Labelling & Grid Location Automation

- Created a CATIA automation tool to rename drawing views automatically based on product tree data.
- Implemented using VBA, improving drafting accuracy and standardization.

Island Elements Checker – HyperMesh / ANSA

- Developed a CAE automation script to detect and manage isolated mesh elements in FE models.
- Implemented using TCL/TK and Python.
- Reduced manual mesh checking time significantly.

BOM Assignment Automation Tool

- Built a tool to automatically assign material properties and thickness from CAD BOM to FE models.
- Integrated material databases with HyperMesh using TCL/TK scripting.

Headstock Design Automation-Kennametal

- Increased engineering efficiency by developing CAD automation application using SolidWorks API and C#.NET.
- Automated part modeling, gear calculations, assembly creation, drawing generation, and BOM export.

Jigs & Fixtures Design Automation

- Created automation logic to generate standard jigs and fixtures designs using CATIA and SolidWorks.
- Reduced manual modeling effort and improved design consistency.

EDUCATION

Bachelor of Mechanical Engineering

2010 - 2013

Info Insitute of Engineering

AWARDS

Innovation Award - Faurecia

Certification of Excellence - HCL Technologies
